## Ethernet Leased Lines offer guaranteed performance with simultaneous and symmetrical bandwidth

Ethernet Leased Lines from Giacom are available as an Internet Access product, with the flexibility of having managed Customer Premises Equipment (CPE) and services, or as a wires only service. Internet Access Ethernet offers an always on internet connection providing high performance, cost effective, dedicated access for organisations of any size backed up by leading service level agreements (SLAs) and Service Level Guarantees (SLGs). Giacom also offers Ethernet Point to Point, linking two customer premises together, or a customer site to a data centre, outside the coverage of the Giacom network or where internet access is not required by the customer.

Internet Access Ethernet

Managed Solution

Our Internet Access Ethernet product is available across three technologies:

- Full Fibre Ethernet
- Ethernet over FTTC (EoFTTC/GEA)
- Ethernet First Mile (EFM)

Wires Only

Partners wishing to source and manage their own hardware and provide their own monitoring, support and service wrap can choose Wires Only Ethernet – available on Fibre Carrier Ethernet, Ethernet over FTTC (EoFTTC/GEA) and Ethernet First Mile (EFM). In return, you will benefit from our lowest ever pricing, on a choice of the UK's leading carriers.

Key Benefits

- High availability
- Fully managed CPE
- Service Level Guarantees (SLGs)
- Portal based circuit performance monitoring

Key Benefits

- Source, configure, install and support your own hardware/CPE
- Provide your own monitoring and backup services
- Win business from customers who have already invested in equipment, or have a router they wish to use

Key features

Guaranteed symmetrical bandwidth	Choice of the UK's leading carriers	Ultra-low latency
CPE monitoring included	24/7/365 support	Unlimited usage and free static IPs	High availability

Available Ethernet technologies

Full Fibre Ethernet

- Delivered using a dedicated fibre for the tail between the POP and customer site, it is capable of dealing with large numbers of users and any high bandwidth cloud based application
- Up to 1Gbps simultaneous download/ upload bandwidth

Point to Point Ethernet

- Point to Point Ethernet is a wires only product used to connect two locations using a fibre carrier Ethernet solution (this can be two customer premises or a premises to a data centre)
- P2P Ethernet is the most secure way to transfer your customers' data as it does not utilise any public access networks

Ethernet First Mile (EFM)

- Provides a guaranteed high performance dedicated service, particularly useful where fibre is not available
- Up to 35Mbps download/upload bandwidth

Ethernet Over FTTC/GEA

- High velocity, hybrid solution – giving you Ethernet SLGs with the cost benefits of FTTC
- Up to 19Mbs download bandwidth
