

Integrations: Sage

Combine yourCloud Market Tools with

Sage for effortless data flow.

Our integrations with Sage 50cloud Accounts and Sage 200cloud streamlines data management between your billing and finance systems, eliminating both the time wasted by re-keying data, and the errors that can occur with manual data entry.

You can be confident that all users have the most accurate information at their fingertips and can act upon it accordingly. Empowering your operational and billing staff with information about the financial status of your customers, enables you to tailor your processes according to that financial status.

Having up to date finance information within the billing system also means you can make it more readily available to your customers via the Self Serve portal.

Key features

-  Invoices can be posted to Sage from one click within the Billing system.
-  Create direct debit collection files for the bank, and post payments back to the sales ledger
-  Mark invoices as paid in bulk through the Billing system.
-  View transaction history within the Billing system, including payments received, outstanding balances and aged debt information.

Benefits

-  Improve security by removing manual file import / export routines of invoice and payment transactions.
-  Boost productivity with reduced manual data entry.
-  Increase accuracy with data synchronisation across your billing and finance systems.
